Australian company Howe Foods uses EnWave technology to produce banana chips.

Detail Introduction:

EnWave recently announced a commercial license with Howe Foods ("HFG"), a diversified family-own business and Australia's second-largest banana producer.

HFG also procured a small commercial REV machine from EnWave to begin commercial production a continue product development.

The license grants HFG exclusive rights to use EnWave's proprietary Radiant Energy Vacuum ("REV") dehydration technology in Australia to produce dried banana products and non-exclusive rights to produce blueberry products in Australia.
