dehydrated peas

Whole Green Peas (*Pisum Sativum*) are part of the legume family. Whole peas are husked and about 1/4 of an inch wide and pale green. Split peas have a mild flavor and soft texture. The Split Pea has an earthy flavor than the whole dried pea, similar to the lentil in versatility and nourishment. Whole Dried Peas have a history going back some 10,000 years. Originally from the Middle East, peas soon spread through the Mediterranean region and on to India and China. The cultivation of peas in Europe helped stave off a famine in England in 1555. Peas are most commonly used in their split form. Whole Green Peas are an acceptable substitute for fresh peas.

Usage: Whole Green Peas were traditionally cooked to a puree and mashed to make a thick porridge. Peas often break down while cooking, and therefore, they make an excellent choice for thick and hearty soups. We can also use peas to make a mock cream soup to avoid dairy products.

Preparation:

Soak overnight.

Rinse, and cover with fresh water.

Bring peas to a boil.

Reduce heat, cover, and simmer for 45-60 minutes.

The longer this legume cooks, the more it will break down and cause soups to thicken.
