

Frozen Pawpaw

Specifications :

Price	Contact us
Place of Origin	China
Min.Order Quantity	100
Payment Terms	T/T,L/C,D/P
Supply Ability	10000
Delivery Detail	3days-7days

Detail Introduction :

This is the next best thing when fresh fruit season is over – 100% frozen pawpaw pulp (and a smidge of ascorbic acid). Shave or grate the pulp into smoothies, or use it to make delectable homemade ice cream.

As pulp thaws, it begins to discolor with oxidation and gradually turns brown (similar to bananas, avocados, apples, etc.). To minimize this, use pulp quickly. Always thaw in a refrigerator, and do not allow the pulp to sit indefinitely after thawing.

Use caution when baking with pawpaws (fresh or frozen). Pawpaws also should never be dehydrated into fruit leather. There are reports of individuals experiencing gastrointestinal distress when baking and dehydrating.

Brewers, distillers, and other wholesale customers may inquire via the Contact form about bulk quantities of frozen pawpaw pulp for 2022.

PLEASE READ BEFORE ORDERING:

It is highly recommended that shipments more than an overnight delivery from Ohio select next day or two-day shipping. Please consult the UPS map here to view estimated days in transit for shipments from Ohio.

Customers who choose shipping via a slower method assume all risks. No refunds will be issued.

The pulp cannot be expected to ship well over numerous days.

Certification:ISO,HACCP,BRC,KOSHER

Size: DIA:10*10mm,15*15mm,20*20mm

Parts: dice,halves

Style: Frozen

Pawpaws are the only large fruit native to North America—they fed mastodons and bear-sized ground sloths millennia ago. More recently, Native Americans ate pawpaws, and George Washington enjoyed them as a favorite dessert. Yet they are little known today.

Native to the eastern half of the United States, pawpaws are a little bigger than avocado and comparably heavy. Ripe pawpaw has an almost liquid texture with a pungent, sweet smell and a taste reminiscent of tropical fruits such as mangoes and bananas. (They're sometimes referred to as

the poor man's banana or hillbilly mangoes.) In terms of taste, the fruit is at times celebrated and, at times, belittled. Advocates praise pawpaws' creamy, tropical taste. Agronomist E. Sturtevant described them as "too luscious for the relish of most people," and botanist William Werthner said of their puckery flavor, "only a boy can eat more than one at a time."

In the earliest days of human society, pawpaw trees were unusually generous. Fruits and vegetables such as corn, strawberries, and carrots were small and bitter before humans tediously grafted and bred them for size and flavor. But wild pawpaws were large, and the fruit is one of the world's most nutritious, providing a good source of potassium, several amino acids, and Vitamin C, iron, and copper. Pawpaws were a staple of many Native American diets, and Lewis and Clark were content to live off them during a leg of their 1804-06 journey across America.

But while many shortcomings of apples and strawberries were bred away, a lingering characteristic of the pawpaw became a liability in the modern world: its short shelf life. The trees are only harvestable from late August to mid-September, and if kept at room temperature, the fruit ripens to the point of fermentation within three days. Pawpaws bruise easily, and the only effective way to ship them is frozen.

Research to develop pawpaws for the mass market is still in early stages, but a cult following has developed in the last 20 or so years. At Ohio's annual Pawpaw Festival, vendors sell pawpaw ales, ice cream, and other pawpaw foods.

Can pawpaw fruit be frozen?

Save some pawpaws for later.

Thus, freezing the pulp of the fruit is really the most versatile way to preserve them so you can enjoy pawpaws past their fleeting season. You can freeze entire pawpaws, but this takes up a lot of freezer space.

Can pawpaw fruit make you sick?

While many people enjoy the taste of pawpaw, some individuals become sick after eating the fruit. Skin rash, nausea, vomiting, or diarrhea can develop. In other cases, individuals may be allergic to the leaves or the fruit skin.

Is PawPaw fruit toxic?

The pawpaw fruit's skin and seeds can be toxic.

Both have proven toxic to humans. In fact, according to a Purdue University fact sheet on the fruit, the seeds contain vomit-inducing alkaloids in the endosperm.
