More Demand and Greater Potential for Frozen Cherries

Detail Introduction:

Cherry production suffered its worst hit in 2017 as climatic conditions impacted the world's fruit and vegeta supply. During last spring's frosty weather, cherries in Europe, especially major producing countries such a Germany, Belgium, Bulgaria, Netherlands, Switzerland, Slovenia, Czech Republic, Croatia, Poland, Austri

France, suffered losses.

The lack of supply has affected the total supply of cherries in Europe and the United States, with merchan to source cherries from multiple origins in order to have sufficient supplies to meet demand.

Carmen Popescu of Octofrost believes that single frozen cherries are a great way for growers to maximize harvest, and the company encourages producers to get in touch with them to learn more about single frozen cherries and what they need proper preparation for freezing works.

"Cherry is a high-value product and increased demand from the dairy and confectionery industries is contributed the demand for individually quick-frozen cherries. However, not all frozen products can be processed in the way." Carme said. She continued: "In order to maximize the harvest of cherries, it is important to choose the freezing method. Cherries are a juicy and high-Brix product, so correct feed temperature is required to ma good appearance, shape, and high yield of the fruit.
