Persistent rains have fattened lemons more than used and reach giant sizes

Detail Introduction:

The fine lemon campaign is practically over, driven by good prices in recent weeks due to less fruit as At the same time, the first Verna lemons are beginning to be sold, whose volumes are expected to dr more than 40% according to Ailimpo and whose sizes are excessively large due to the influence of the "The harvest already came with a forecast of reduced volumes due to bad weather during the fruit so In our case, it has been reduced by around 30%. As there is less load of fruit on the trees and it rains continuously In March and April, the lemons have fattened much more than usual and reached giant explains Enrique Fuentes, commercial director of the Murcian company Hijos de Alberto del Cerro.

"Normally the markets demand sizes 3,4 and 5 and this year sizes 1,2 and 3 abound. So medium and lemons are highly valued," he continues. "It is not being easy to convince buyers that there is a short that for this reason, lemons of more commercial sizes have high starting prices. It will be more difficult introduce large sizes since few markets are interested in them."

"Furthermore, we are not alone, since there are already South African and Argentine lemons, still in squantities, although they come with good production and sizes. It will be in 2 or 3 weeks when there significant volumes from Argentina and South Africa on the markets. Europeans," says Enrique Fuent

"It should be remembered that South Africa has gained positions in Europe, since before they were not focused on Asia and the Middle East. These are quality lemons, on a par with the Spanish product whits best. Argentina has also gained weight in the United States but still sees Europe as an attractive metalor of the commercial director of this company, the competition with Turkey for the Primofiori has been stronger in the countries of Eastern and Central Europe. "Turkish exporters have diverted merchandise destined for Ukraine and Russia to other EU countries, seeking security in payments. Defact that our production has been lower, there has been greater competition and pressure on prices." The change from plastic to compostable materials has been a challenge"

Hijos de Alberto del Cerro allocates more than 80% of its sales to European markets. In the last year, have invested in converting part of the packaging lines in order to eliminate the use of plastic in mark as France, where a ban on plastic packaging was imposed in 2022 on fruit and vegetables.

"Now we can make our fruit in the same formats that we have been doing, but with completely composite materials, such as cotton and cellulose. Replacing plastic with these materials has been quite a challed addition to the fact that they are more expensive and their availability is limited. has been very limited the start of the war in Ukraine. We anticipate that other countries such as Germany and Austria will for France's footsteps in terms of eliminating plastic. At the moment, we detect interest in these material those orders of organic lemon, of Zero Residue or without post-harvest treatment, in different countries that the start of the war in Ukraine.
