The rains and the strike give a boost to the prices of the last Primofiori lemons

Detail Introduction:

The marketing of Fino or Primafiori lemon is now in its final stretch and in transition towards the star Verna campaign, which will be harvested and marketed in April. In the field, the last operations are to place for the last fine lemons, with prices that depend on the quality and percentage of commercial that range between ≤ 0.30 and ≤ 0.40 per kilo.

"Supply difficulties finally allow us to shed some light and improve sales prices in the market," they salimpo. "On the one hand, the heavy rains, unusual in Spain, have temporarily suspended the harve other hand, the transporters' strikes have made it difficult to transport lemons to Europe. In this conclear reduction in supply, the demand for The end has clearly tightened and has resulted in slight pri increases, which were already demanded and expected for weeks, a trend that must be consolidated final stretch of the fine lemon campaign."

The Verna season perfectly complements the Fino lemon commercial window, since the bulk of its had takes place from the beginning of spring to the end of summer, a scenario that allows producers of Elemons produced in Spain meet consumer demand.

Regarding the course of the Verna lemon campaign, the forecast finally points to a harvest close to 19 tons for this 2022, which will mean a reduction of around 45% compared to the volumes of 2021. This to the fact that the Adverse weather conditions last year -cold, wind and excessive rains- affected flow and fruit set in some production areas, according to Ailimpo.

Verna is an original and representative variety of Vega del Segura, in the Region of Murcia, although i grown in the fields of Andalusia, especially in the province of Malaga. "In fact, it is a native Spanish va unique in the world, which gives it a very special character," they point out from the interprofessional
