

They present the latest developments in the remote control of cold rooms

Detail Introduction :

Cold rooms for the short and long-term storage of fruit and vegetables, controlled atmosphere chambers, ripening chambers for bananas, processing facilities for fresh-cut products, pre-cooling spaces, mechanized chambers, freezing tunnels, refrigeration of fluids for industrial fruit processing processes, low-temperature chambers for storing frozen products and vertical farming solutions are the most important applications that the Italian company Monti & C. makes available to Italian and foreign entrepreneurs.

"Monti & C. was the first company to dedicate itself to researching suitable tools for the nursery sector. The long experience gained from the numerous creations that we carry out in the most important Italian companies in the sector and its associated technical collaboration and constant search for new solutions allows us to meet specific needs", explain Christian Niccolai and Federico Papini.

Monti & C.'s clients include the most efficient producers, processors, and marketers of fruit and vegetables and food products in general and logistics platforms for the distribution of refrigerated and frozen products.

"Our company, founded in 1947, deals with the design, construction, and installation of isothermal chambers and complexes, complete with commercial, industrial, and experimental refrigeration and air conditioning systems. Many areas of interest are the fruit and vegetable, flower, and nursery sectors. Logistics, retail, and even vertical farming.
