We work hard to help apple traders extend the shelf life of their pro

Apples are rich in natural sugars, organic acids, cellulose, vitamins, minerals, phenols, and ketones. In addition, apples are one of the most present fruits in any market. Every year more than 70 million to apples are produced worldwide. Europe is the largest export market for apples, followed by Asia, Nor America and South America. The outbreak of COVID-19 has caused many difficulties for the export of around the world. Shipping capacity is limited, shipping rates have increased significantly, and shippi are often delayed. Under these circumstances, the most pressing challenge for exporters in the indus keep apples in storage or being transported fresher in order to extend their shelf life. As a result, the been a huge increase in demand for 1-MCP.

SPM Biosciences (Beijing) Inc. specializes in food preservation services. Company spokeswoman Debl introduces Angel Fresh products, which they developed to keep apples fresher in storage for longer. already widely used by apple growers and traders around the world to keep apples fresh in cold stora MCP is highly effective in keeping apples fresh after harvest. The products 1 -MCP can effectively exte shelf life of apples in storage and help reduce water loss, loss of firmness, and flavor changes that ap transit may experience due to shipping delays. In this way, 1-MCP products maintain freshness and e the shelf life of apples, allowing exporters to supply higher quality apples to their customers," explain "Our products are suitable for regular warehouses and cold storage facilities. Of course, they can be combination with low temperature or modified atmosphere preservation techniques for best results. In addition to using 1-MCP products in cold storage, some retailers are beginning to use these produretail to extend the freshness of apples throughout the supply chain. "We have received many questi importers and exporters about our Angel Fresh sachets. They are easy and convenient to use. Custor place the sachet in the bag/box of apples, that's it," says Debby. "We can provide customized mainter solutions for different container sizes and other conditions of use."
